

LAB10 – Structs Exercise

Write a program to do followings.

- Define a structure whose name is **ELEMENT**. The member fields are :
 - Element symbol (3 characters)
 - Element name (10 characters)
 - Atomic weight (int)
- Declare an array of ELEMENT type and initialize (block initialization) with data given below.
 - "Ca", "Calcium", 20
 - "H", "Hydrogen", 3
 - "C", "Carbon", 24
 - "Na", "Sodium", 18
- By using looping, print all information in the array, and also calculate the **average of weights**.
